

Steam Door Set

A good **steam** door traps steam inside and directs the condensed water towards the floor drain. SAWO steam **door** set does this all and has a **sophisticated** slender appearance! It has rubber gasket and a magnetic lock to keep the steam inside the room. The lower part of the 8 mm thick **tempered glass** has a water catcher attached to it. The water catcher together with an inclined lower jamb makes sure that all the water stays inside the steam room.

The steam door set is very easy to assemble. One may attached it to the walls using silicone or screwing the jamb into the wall opening. Extra screws and rubber caps are provided.

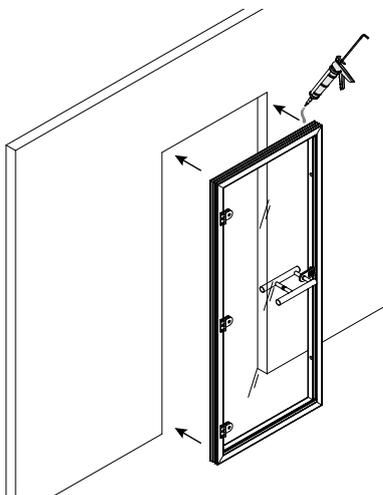

Specs:

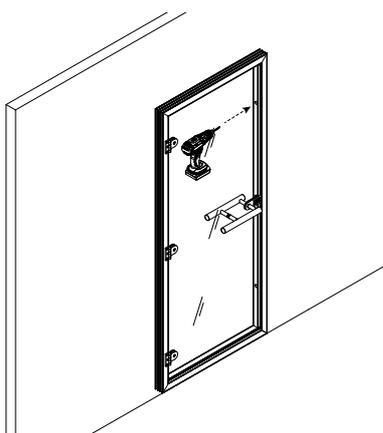

- » aluminum door jamb
- » frosted 8mm tempered glass door
- » stainless door handle set
- » 3 heavy duty hinges
- » magnetic door lock
- » sealed rubber gasket
- » plastic water catcher
- » wedges for easy installation
