

HEATERKING

HEATERKING

Heaterking is one of SAWO's top-of-the-line sauna heater designed by world renowned Finnish designer **Stefan Lindfors**.

The heaterking is a very unique and creative sauna heater. The heaterking, with exemplary looks is also with well defined characters.

This heater is with thick, high premium stainless metal sheet casing that is laser cut with an intricate junglefire pattern. It is a floor standing heater that can handle up to 360kg of stones. A stone spacer is included. It kept proper airflow inside the heater that fasten the sauna room heat-up time.

The heaterking is operated with a separate control or it can be ordered as an *Ni model.

Heaterking heaters are available from 3kW up to 24kW rating capacity.

**Ni Models are with built-in power controller inside the heater. Connect an Innova user interface to operate.*

WALL

ROUND

CORNER

Two parts metal casing

Putting the stones below the heater becomes very handy when the casing for tall heaters are in two parts. It is recommended to place the larger stones at the bottom. Use only bigger than 35mm sized stones so that there is a good airflow in the heater.

Place the top casing and continue adding stones little over the rim after completing the stone placement at the lower part of the heater.

Stone Spacer

The stone spacer separates the stones from the heating elements. It makes the heating elements to last longer as they are not in contact with the stones.

The stone spacer also improves the air ventilation inside the heater. A proper airflow inside the heater makes the heater to heat up fast.

Adjustable Leg Support

When the flooring is not even, just twist the height of the adjustable leg support to get the correct balance of the heater.

INNOVA
POWER CONTROLLER

FIRECONTROL

Heater Controls

The Heaterking can be operated using a Separate Control (NS) or Ni Controls (Ni).

NS Heaters are using external control. SAWO has several list of separate controls that is fully equipped with multi sauna functions. One good recommendation for the Heaterking is the Firecontrol. It is a touch screen LCD control with Innova based operations where user can set a weekly sauna session, adjust the light brightness, fan, function for heater and steamer (combi), ready for household automation, power interruption saving settings, and many more...

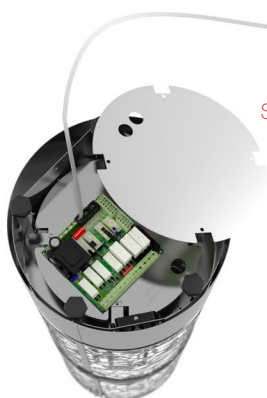

Ni heaters are with Innova Power Controller hardware placed inside the heater. Innova Touch Stainless Steel, Innova Touch, Classic or Classic 2.0 user interface can be used.

STAINLESS STEEL TOUCH

CLASSIC 2.0

Ni HEATER

Extra Accessories

Heater Guards and Collars

As the heater can reach up to 120 deg. Celcius, a **Heater Guard** is needed to prevent accidental contact with the heater. Heater guards are compatible with Heaterking Round models only. Available in Cedar or Aspen wood.

The excessive heat near the wood can create burn marks. **Collars** does not only protect the wood but also add elegance in the sauna room. Collars can vary as soapstone, stainless steel or a Cedar wood.

HEATER GUARD

COLLAR

Cozy Tank

Cozy Tank is a mechanical humidifier that increases the moisture inside the sauna.

Place the Cozy Tank between the heating elements and stones around it. The water inside the cozy tank will evaporate to create a soft mild steam. The addition of humid air neutralizes the dry sauna heat.

Additional aroma oil can be diluted together with water for a rejuvenating sauna smell.
