

UNLEASH THE Phoenix

INSIDE YOUR SAUNA ROOM

This is PHOENIX heater. Not your ordinary heater.

Design inspired by water, made for water to become steam. The casing is tapered to store massive amount of stones. It can handle almost 90kG of stones! The ream is wide enough to catch every droplets of water thrown into it. The stainless rods are tough that it won't deform from heat.

Phoenix heater is special because it heats up the sauna room faster. The flue inside the heater provides a good air flow for the merging warm and cold. The heating elements can last longer as they are separated by the flue. Also, Phoenix can be installed with a heater guard to safeguard bathers from accidental burns.

The Phoenix heater is exclusive only for grand and middle sized sauna rooms.

Advantages:

1. Unique tapered design
2. Strong rods
3. Loaded of stones
4. Fast heating up time
5. Heater guard
6. Best for middle sized sauna rooms
